

CASA MONTI

Sustainable fabrics

A new generation of fabrics *made without water*

Casa Monti combines refined textile design with an innovative dope-dyed production process. The result is a collection that uses no water during production while significantly reducing energy use and avoiding harmful chemical discharge.

Better for the environment. Designed for everyday well-being.

[Sustainability summary](#)

CASA MONTI

Designed for planet and people

Traditional textile production uses approximately 100 litres of water per kilogram of fabric. Casa Monti eliminates this water consumption through advanced dope-dyed yarn technology. Selected products also provide very good acoustic performance, helping to create calmer, more comfortable spaces.

0 L

Water used

No water consumption during the production process.

60%

Less energy

A significant reduction in energy use compared with traditional production.

0

Harmful waste

No harmful chemical discharge into the natural environment.

100%

For the future

Every choice of Casa Monti fabric helps preserve thousands of litres of clean water.

Quiet

Acoustic comfort

Certain products offer very good acoustic values, contributing to quieter interiors and improved well-being.

Dope-dyed yarn · water-free production · acoustic performance

Better for the environment. Designed for everyday well-being.

Made without water

Colour is added to the yarn itself during the dope-dyeing process, so no water is needed for dyeing and no chemical discharge reaches the natural environment.

Quiet by design

Selected Casa Monti fabrics offer very good acoustic values, softening sound in the spaces where people live, work and gather.
